

## 3.2

### 3.2 Differentiability

Objectives:

- I can determine if a function is differentiable

Given  $f(x) = \frac{1}{2}x^2$  find the slope of the secant line of  $f(x)$  over  $[1,5]$

Find the average rate of change of  $f(x)$  over  $[2,4]$

Find the average rate of change of  $f(x)$  over  $[2.5,3.5]$

Choose an interval from the last slide that gives the best approximation of  $f'(3)$ . Explain why your method gives an accurate approximation

Could you use this process to find  $f'(x)$ ? Why or why not?

Find  $f'(3)$

Differentiability

$$f(x) = \begin{cases} x+2 & \text{if } x < -1 \\ x^2 & \text{if } -1 \leq x \leq 1 \\ 2x-1 & \text{if } x > 1 \end{cases}$$

The graph of  $f(x)$  is given. What do you observe at  $x = -1$  and  $x = 0$ ?

## 3.2

### Definitions

$f(x)$  is differentiable at  $x$  if  $f'(x)$  exists

$f(x)$  is a differentiable function if  $f'(x)$  exists for all  $x$  in the domain

In what cases would a function not be differentiable at a point  $x=a$ ?

### Exploring differentiability with local linearity

Compare  $f(x) = \sqrt{x^2 + .001} + .99$  and  $g(x) = |x| + 1$  in your calculator.

How do differentiability and continuity relate to each other?

### IVT for Derivatives
